

men's shaving – home use test results:

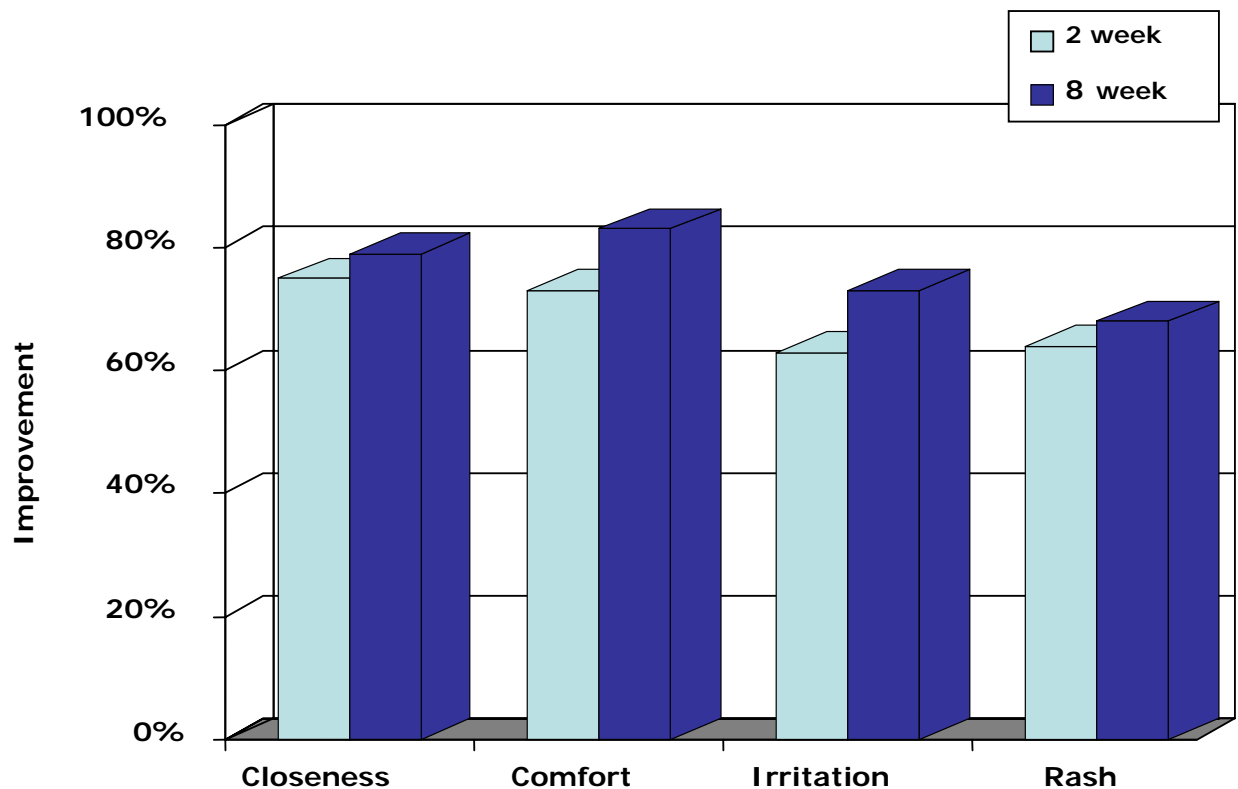

participants report a better shave

Fifty-five men participated in an 8-week Home Use Test evaluating the CLARISONIC® Skin Care Brush with shaving. Participants were instructed to use the CLARISONIC Skin Care Brush to apply their shaving lubricant for 40 seconds prior to shaving. Participants continued to use their preferred shaving lubricant, razors, and aftershave. *At the end of 8 weeks, 81% of participants reported improvement over their previous method of shaving.*

The majority of participants reported a closer shave, increased comfort, and improved ease of shaving within two weeks of beginning the study. Participants also observed a reduction in razor irritation and razor rash while noting improvement in the softness and appearance of their skin.

Experience CLARISONIC for yourself. Just 1 minute, twice a day, for great results. Call 1-888-5-CLARISONIC (1-888-525-2747) or visit clarisonic.com to get started.

Self-reported results from 8-week Home Use Test

2 and 8-week data for 8-week test period.
N=51 and 48, respectively. Data on file.
